CW 220 TP

Class 220° Copper

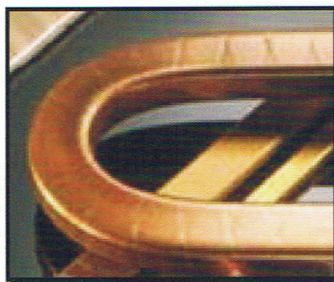

DESCRIPTION

CW 220 TP magnet wire is a polyimide tape insulated system for continuous operation at 220°C or above.

This results in an insulation system that provides excellent dielectric properties and higher temperature capabilities for more severe applications.

APPLICATIONS

- AC Motors
- DC Motors
- Submersible Pumps
- Traction Motors
- Lift Truck Motors
- Motors requiring a higher temperature insulation

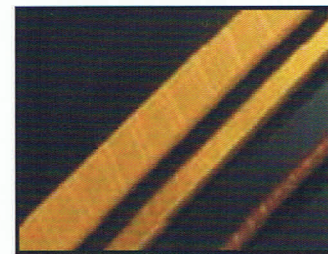

NEMA MW 62-C

FEATURES & BENEFITS

- Excellent dielectric properties
- High temperature continuous operation
- Superb windability
- A wide range of types suitable for most any application

AVAILABILITY

CW 220 TP is available on copper conductors in various types and lappings.

Please consult the Craig Wire service team for more detailed information.
