CW MICA

Class 155° Copper

DESCRIPTION

CW MICA is a mica wrapped insulation system for higher voltage or higher turn stress applications.

This results in an insulation system that provides excellent dielectric properties and superior long term corona resistance.

APPLICATIONS

- AC Motors
- Transit Motors
- Motors requiring resistance to long term corona affects

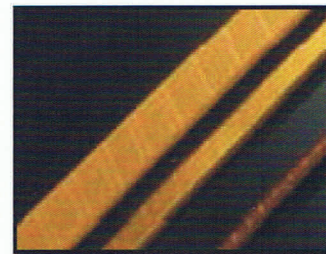

FEATURES & BENEFITS

- Excellent dielectric properties
- High temperature continuous operation
- Superb windability
- A wide range of types suitable for most any application

AVAILABILITY

CW MICA is available on copper conductors in various types and lappings. It is also available over CW 200 enamel.

Please consult the Craig Wire service team for more detailed information.
